Randall at Home

Depth camera for in-home fall detection
so Randall gets help fast

Bed sensor logs sleep patterns.

Motion sensors log activity.

Real-Time Fall Detection

- Alert sent to caregivers with embedded link to depth video clip

Possible fall detected!

Fall confidence: 0.86

ID: 3012

IP: 10.0.1.200

Date: 12_04_2013

Time: 16_08_45_531

Another person was not detected walking in the room.

Video: 

Fall Detection and analysis ...

Can change the course and outcome of the event

CLOUD

More information about the fall can influence medical intervention
Randall's data from home helps avoid un-necessary head CT scan
Nationally - \$30B in wasted MRI/CT imaging
\$2,000 each head scan. Radiation equivalent to 30 chest x-rays

SMART
AMERICA

Hospital will have standards-based “Integrated Clinical Environments”, for full data interchange, device coordination, closed-loop control, “black box recorder”, “IoT for Health Care”

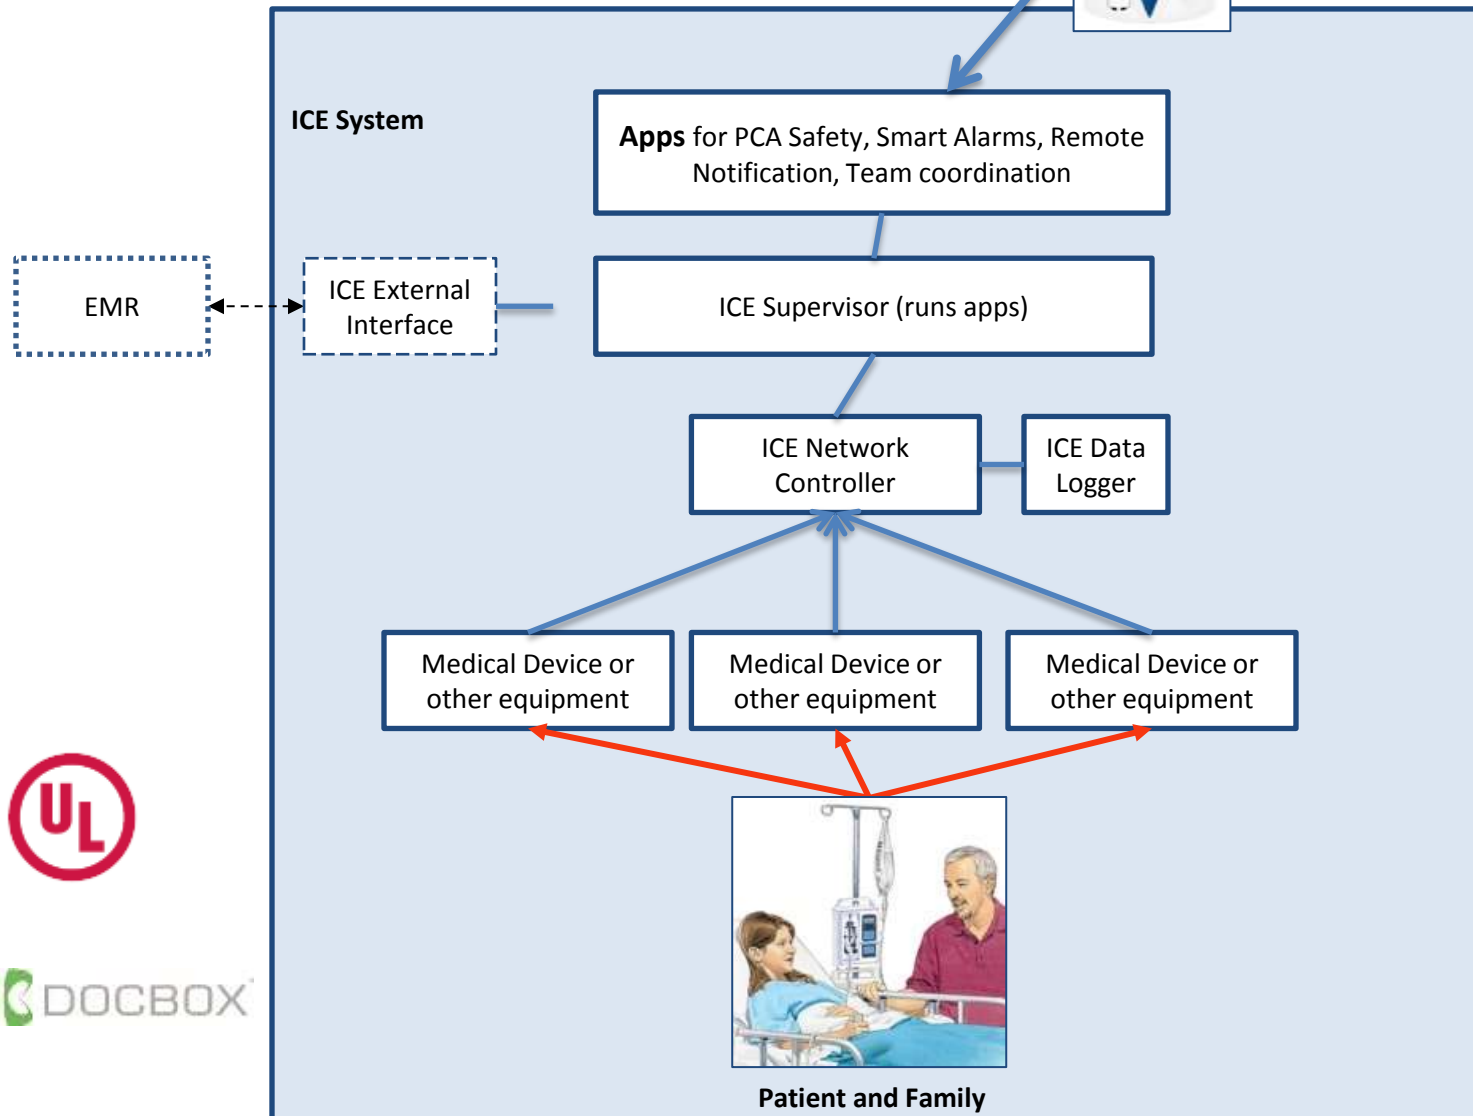

In ED: Retrieving data from remote EHR
Then: Transfer all data and device settings
from ED->OR

Integrated Clinical Environment - Simplified Architecture

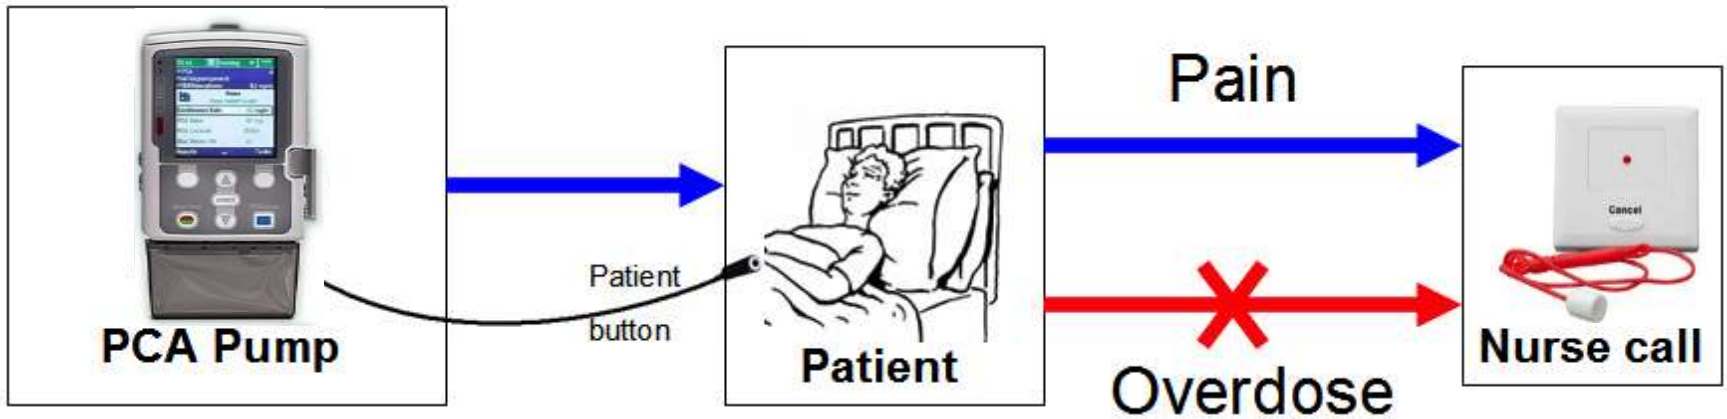

From ASTM F2761-09

Standard recognized by FDA in August 2013

Patient-Controlled Analgesia (PCA)

system safety concerns

- *Patients can call to request more analgesia, but, cannot call for help when over-medicated.*
- *Over-medication can cause respiratory and cardiac arrest*
- *Comprehensive monitoring is not typically used due to high false and nuisance alarm rate*

PCA Safety Issues continue ...

<http://ppahs.wordpress.com/2012/02/01/guest-post-yes-real-time-monitoring-would-have-saved-leah-2/>

This is the story of an 11 year old who died from narcotic-induced respiratory depression.

"Ten years after my daughter's death, nothing has changed in the codes of monitoring post-op patients continuously, until they leave the hospital. Alive."

http://www.apsf.org/newsletters/html/2010/spring/12_coalition.htm

This is a statement from a multi-hospital coalition frustrated by ongoing adverse patient events:

"A closed-loop system, which stops or pauses opioid dosing if respiratory depression is detected, is desirable. Systems are most ideally centrally monitored. In any case, alarms should be audible or otherwise available to the primary caregiver, and a mechanism for prompt response should be in place."

<http://ppahs.wordpress.com/about/>

"Carly Ann Pritchard ... suffered an ankle injury and then underwent surgery to reduce lingering pain from her ankle injury. Unfortunately, although she survived surgery, she suffered brain damage because of an accidental overdose from a morphine-filled pain pump - after surgery. A California appeals court recently upheld a jury's award of about \$9.9 million in damages."

ICE = Integrated Clinical Environment

OpenICE

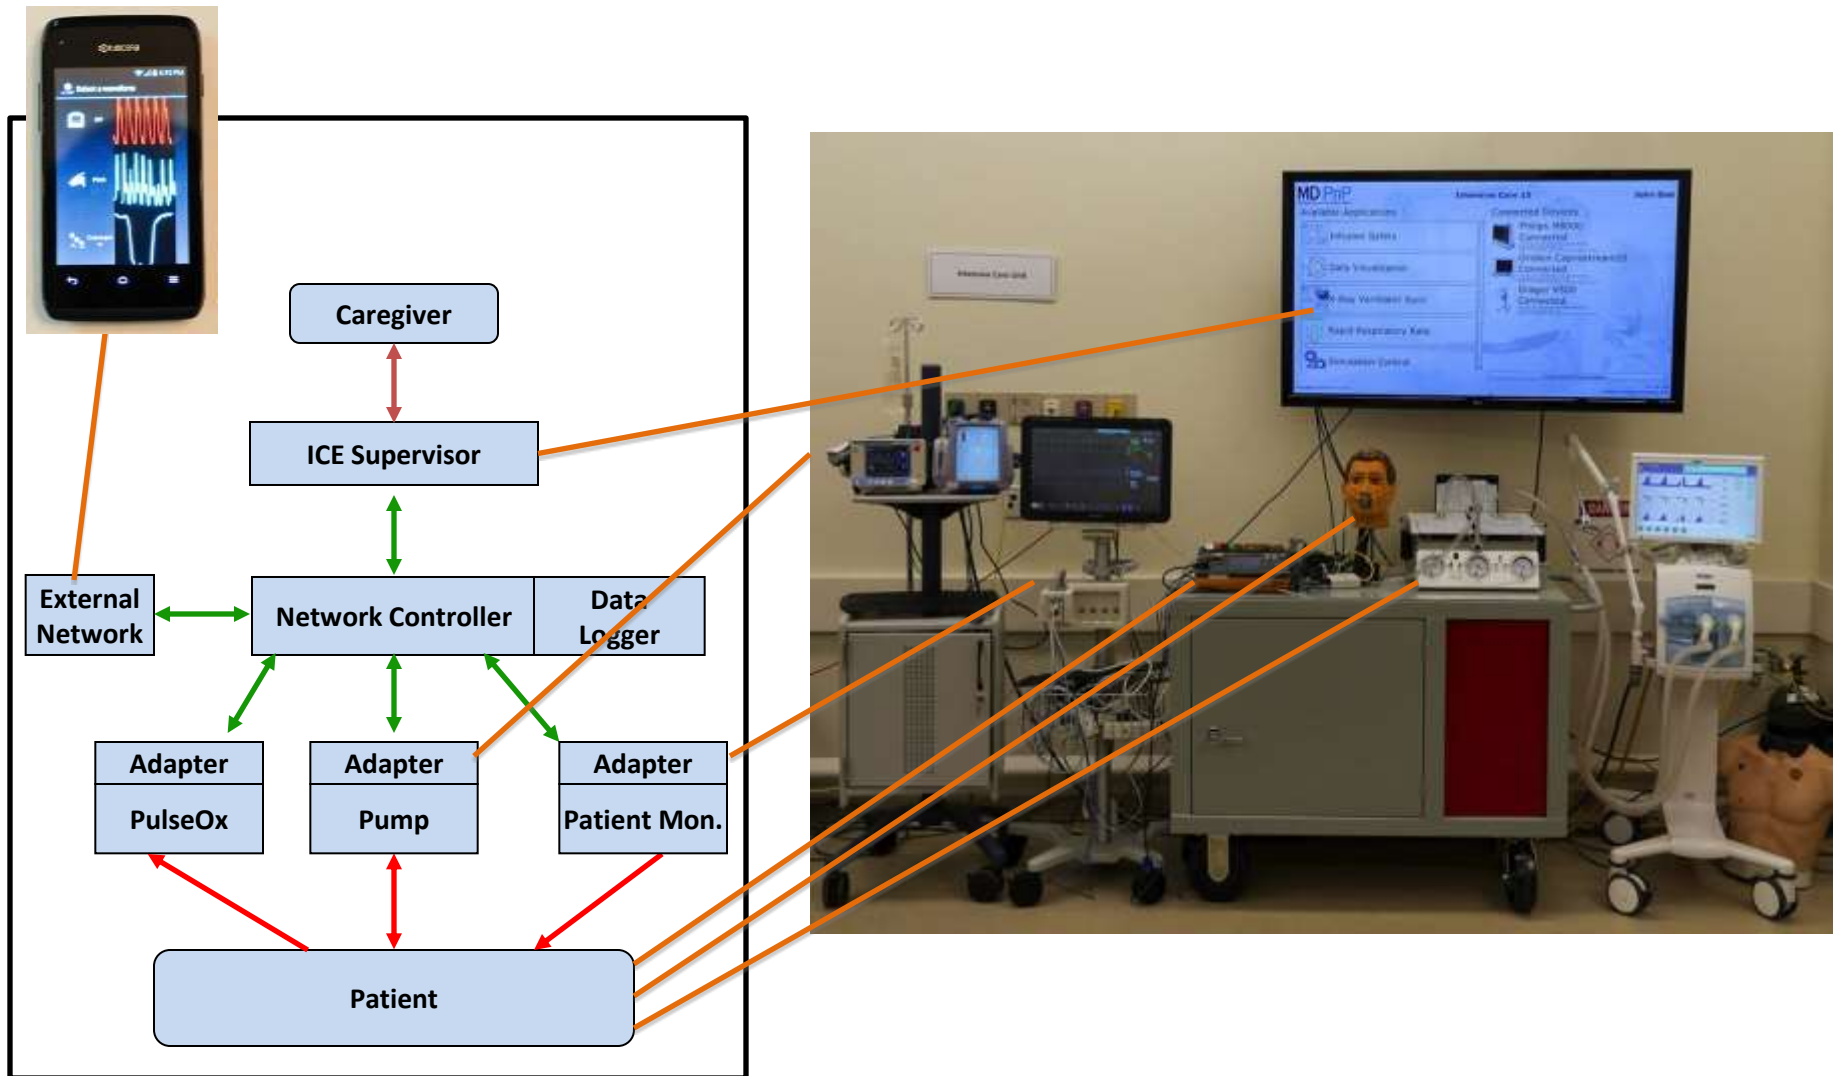

Bitly.com/open_ice

- OpenICE encompasses
 - Medical Device Interfaces
 - Patient Simulation
 - HIS Connectivity
 - Safety Assurance
 - Validation and testing
 - Regulatory Pathway
 - ICE Application eXchange (ICE AX)
 - Med apps, device management
- Everything is open source
- OpenICE™ is a work in progress
 - Currently useful for clinical and CS research, prototyping, standards development/ref implementation, starting point for med device deployment, etc.

Implementing ASTM ICE Standard

Reducing false alarms will reduce alarm fatigue

Safer, more effective pain control

Real-time blue button data available to family and staff

Pain Medication-related Injuries could be prevented with Medical CPS:

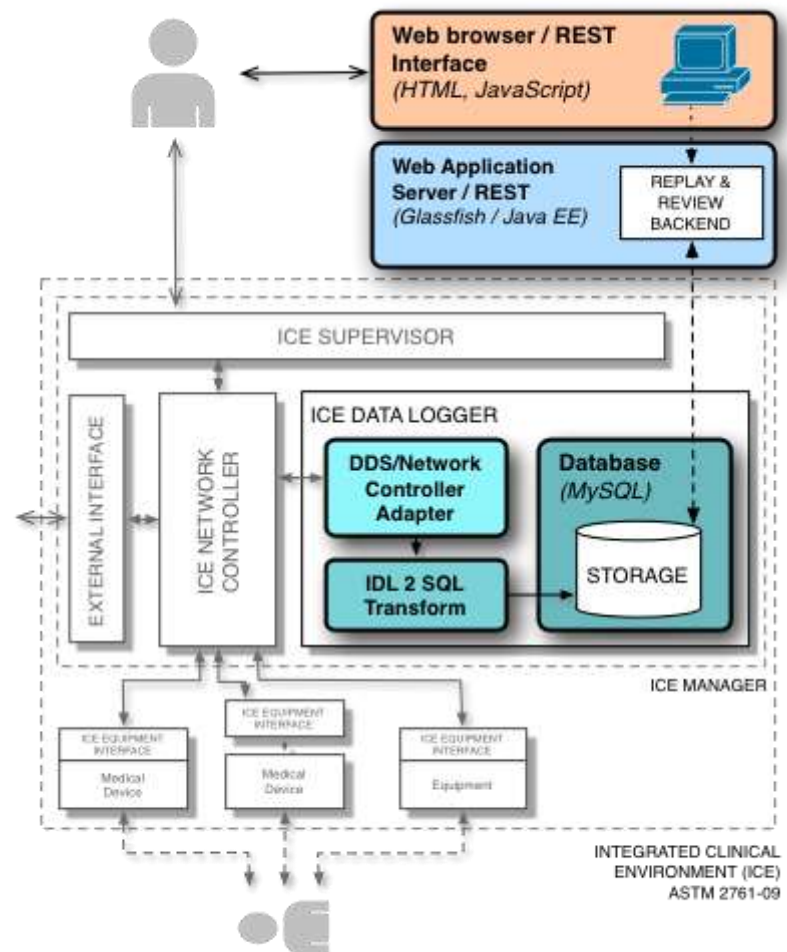

- Over 6000 patients severely injured/killed each year
- Up to \$145M impact
- Untreated pain
- PREVENTABLE!

Safe Interoperability enabled by MCPS

Data Logger “Black Box Recorder” for the Integrated Clinical Environment (ICE)

- A Data Logger is a foundational component of MCPS clinical network. Required to improve forensic analysis of clinical adverse events and near misses
- Required to address safety (Regulatory Science) and liability concerns of network medical systems
- NIST Prototype Features:
 - Platform Independent, Plug-n-play & DDS compliant VM based Data Logger
 - Browser based Playback: Intuitive Data Visualization with Annotation and Search capabilities (Mobile Compatible)
 - Modular Architecture (Loose Coupling)

Inbox Details ~ CDS Medication Warning

Date: 6/6/2014
Type: Alert
Priority: HIGH
From: CDS
Description: CDS Medication Warning

Detail: The Pharmacogenomics Clinical Decision Support System has detected a transient, but significant blood pressure reduction associated with this patient's Lopressor administration. This patient also has Single Nucleotide Polymorphisms (Ser49Gly, Arg389Gly) in the ADRB1 gene that have been associated with variable Lopressor efficacy. An alternative class of medication may be indicated if more predictable blood pressure control is desired.

OpenICE + Analytics

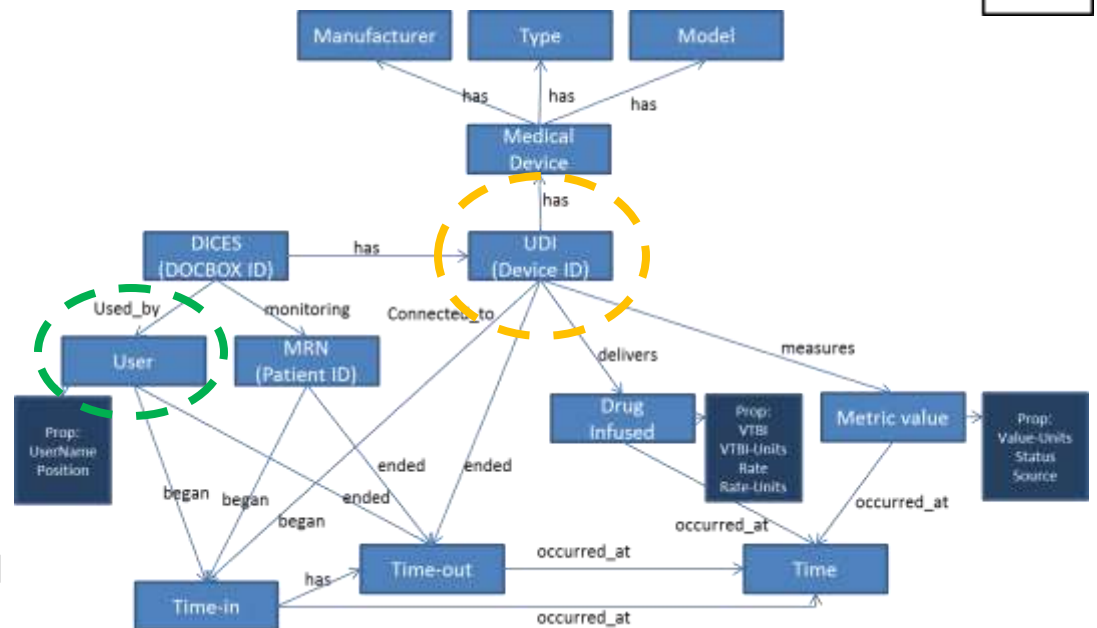

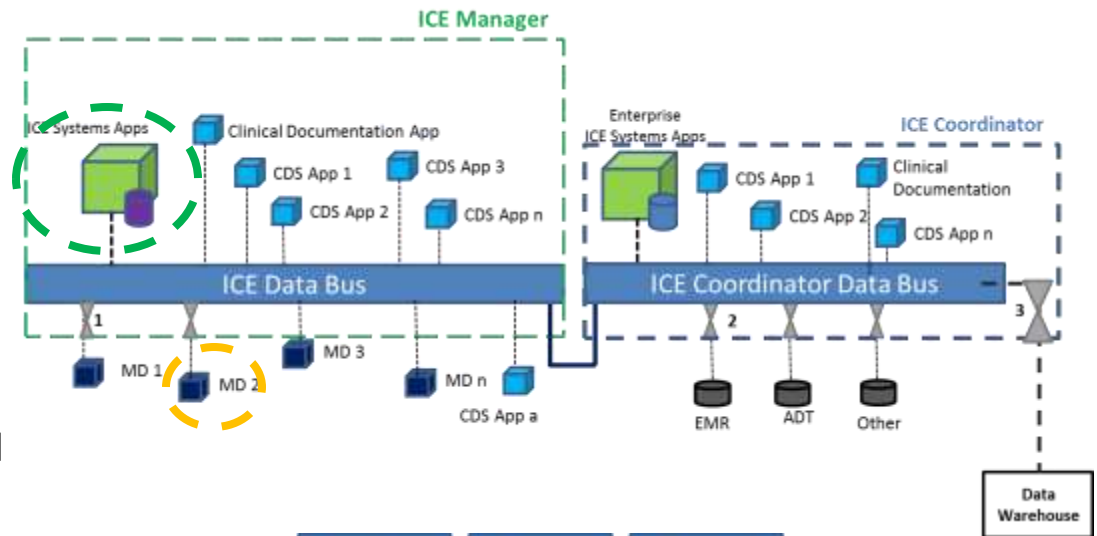

IoT for Health Care benefits from information about users of each specific device

SEMOSS is an open analytics technology that can find connections between data stored in multiple repositories.

DOCBOX's ICE Manager integrates medical device data, clinical context, and IT data to enable real time decision support and analytics to occur for an individual patient, the point of care, or across the entire system.

Questions that could be answered:

- How many times did this patient utilize this device ?
- Who are the various users working with this device?
- How much time Nurse ABC spend providing direct patient care across the continuum of care (all patients all units)

Patient is discharged ... to a smarter home
